

Results

Of the 500 results, 297 websites were unique and able to be scraped
171 of these sites ran on Apache
A measly 36 ran on IIS
90 ran on something else or hid that information

Apache invalid sites averaged 120 errors, warnings averaged 27
IIS invalid sites averaged 155 errors, warnings averaged 71

Conclusion

These results are a little disappointing and may mean a larger sample size is required to get a better understanding of the code quality of IIS sites.

Additional Remarks

The raw results are available here:
